

Yam:CocoaDAO
Symbol: \$COCOA
Supply: 100,000,000,000
Network: TON

Chapter 0.

In pre-Hispanic times, cocoa played a crucial role as a currency of exchange in Mesoamerica. Let me tell you more about this fascinating story:

Chapter 1.

Cocoa as Universal Currency:

During the splendor of the Mexica Empire, cocoa stood out as a universal exchange rate due to its commercial value. The residents of Tenochtitlan (the capital of the Mexica Empire) were organized into clans and used cocoa as a means of exchange.

The Tlatelolco market was the most important place of commerce in the Mexica Empire. There, spices, animals, ceramics and a variety of fruits were offered. Cocoa was the currency used throughout the empire.

The term "cacao" comes from Nahuatl, where "cac" means red, referring to the reddish color of cocoa seeds.

Episode 2

The Value of Cocoa:

Cacao was a medium-sized tree that produced thick almonds. Only experienced workers could grow it, as they had to know the signs of ripening to prolong its productive life.

In addition to being the typical drink and food of the Empire, cocoa was used in traditional herbalism to relieve discomfort.

Its most important use was related to the ritual function. Chocolatl, one of the four varieties of cocoa beans, was the best and could only be used by the elites in power. It was used in coronation ceremonies for political leaders.

Chapter 3.

After the Conquest:

Even after the fall of the Mexica Empire, cacao continued to be a valuable currency in New Spain. Indigenous forms of money coexisted with Spanish money, and cocoa continued to function in the integrated monetary system.

In short, cacao was not only a food and drink, but also a currency that connected Mesoamerican civilizations in a network of exchange and value.

Mission:

“Revive the ancestral tradition of cocoa as a currency of exchange, now in the digital age, through our token **\$COCOA** on The Open Network (TON) network.”

Vision:

1. Connect Communities:

We want to connect people from all over the world, just as cocoa united Mesoamerican civilizations. Through our token, we will facilitate commerce and collaboration between diverse communities between web3, web2 and ancient cultures.

2. Sustainable Value:

We seek to preserve the intrinsic value of cocoa. Like the ancient Mesoamericans, we consider cacao to be more than just currency. It is a symbol of wealth, culture and respect for nature.

We are committed to maintaining the stability of our token and promoting sustainable practices in its use.

3. Education and Awareness:

We wish to educate people about the history and meaning of cacao. Through educational programs and campaigns, we will share its cultural relevance and its role in the pre-Hispanic economy.

We will promote awareness about the importance of preserving valuable traditions and connecting them with modern technology.

4. Innovation and Adaptation:

As part of our vision, we will explore new ways to use the token **\$COCOA**. This includes applications in agriculture, tourism, art and more.

We will adapt to the changing needs of the community and take advantage of emerging opportunities in the TON network, making the decision of \$ holders the absolute decision. **COCOA**.

5. Active Community:

Our vision is to have an active and committed community. We will listen to our users, encourage participation and celebrate achievements together.

Together, we will make cocoa shine again as a global currency. In short, our “Cacao” project is not only a token, but a bridge between the past and the future, uniting cultures and generations in a decentralized network. Let's make history! .Our purpose is to revive cocoa as an exchange mechanism, paying tribute to its rich history.

Aim:

Restore the ancestral essence of cocoa as a currency of exchange, empowering communities and preserving their cultural legacy through the token'**\$COCOA**'on the TON network.

Objective Details:

1. Revive Tradition:

- We want to reconnect with the roots of cocoa as currency. Inspired by its history, we aim to restore it to its former glory as a means of commerce and unity in the web 3 ecosystem.

2. Inclusion and Global Access:

- We seek to democratize access to digital cocoa. Through the TON network, we will allow people from all over the world to participate in the exchange of value using the token"**\$COCOA**".

- We will engage diverse communities, from farmers to blockchain enthusiasts, to build an inclusive network.

3. Education and Awareness:

- We are committed to educating about the history and meaning of cacao. We will create information materials, workshops and events to share its cultural relevance.

- We will raise awareness about the importance of preserving valuable traditions and connecting them with modern technology.

- Transparency and education are essential to building trust.

4. Stability and Sustainability

- Our goal is to maintain the stability of the token"**\$COCOA**".In the markets where tokens are traded, their volatility is an inevitable factor, we will seek solutions to excessive volatility and promote sustainable use.

- We will explore partnerships and creation of sustainable agricultural projects to support real cocoa production.

5. Social and Environmental Impact:

- We will measure our success not only in financial terms, but also in how we benefit the cocoa and agricultural communities in general through associations, always taking into account the protection of the environment.

- We will promote responsible practices throughout our value chain.

6. Celebration of Culture:

- Through events, art and collaborations, we will celebrate the cultural richness of cocoa. We want every transaction to be a tribute to your story.

To ensure that real assets support the value of the token “**\$COCOA**”, we will implement solid strategies:

Cocoa crops:

In order to achieve stability and scalability in the price of the token, seed production is necessary as a development approach, this will allow us to create a **Royal Cocoa Reserve**.

Real Cacao Reserve: (RCR) (Wallet #1)

We will create a physical cocoa reserve that backs each unit of our token. This means that for every “**\$COCOA**” digital issued, there will be an equivalent amount of real cocoa stored in secure warehouses.

Transparency will be key. We will publish periodic reports on the amount of cocoa in reserve, only the token holders “**\$COCOA**” may request the import of cocoa stored in the RCR.

The Tokens obtained will be frozen in a wallet intended for the **Royal Cocoa Reserve**.

Independent Audits:

We will hire independent auditors to regularly verify the existence and authenticity of the supported assets. These auditors will certify that the amount of cocoa matches the amount of tokens in circulation.

The audits will be public and accessible to all holders of “**\$COCOA**”.

Smart Contracts and Governance (Wallet #2):

We will use smart contracts on The Open Network (TON) blockchain to automate the management of \$Cacao. These contracts will ensure that transactions are backed by real assets.

The community will have an important role in governance. The holders of “**\$COCOA**” will be able to vote on key decisions related to the reservation, management and collaborative development of the project.

Collaboration with Farmers (DAO):

We will establish alliances with cocoa producers. We will buy cocoa directly from them and store it in the reserve.

By supporting farmers, we will also contribute to the sustainability of the cocoa supply chain.

Distribution of the Token “\$COCOA”:**Initial Reservation:**

10% will be allocated to an initial reserve to guarantee liquidity and development of the project. This includes funding for the team, marketing and strategic partnerships.

Public Sale:

50% will go to a public sale. This will allow the community to acquire “\$COCOA” at a fair price.

Public sale can be done through auctions, exchanges or token launch platforms.

Community and Development:

20% will be reserved to reward the community and encourage active participation.

It will also be used for ongoing project development, network improvements and upgrades.

Founder

1% will be allocated to the founding team and early contributors.

These tokens will be subject to a lock-up period.

Royal Cocoa Reserve:

19% of the token “\$COCOA” as a digital backup of the physical Royal Cocoa Reserve. These tokens will be in a wallet and will be blocked for a period of 10 years.

Chapter 4.

We must build it among everything...
